

## IMPORTANT!!!! RSSS TRAINING BULLETIN

### \*\*\*NEW PROGRAM UPDATE - GETPCODF\*\*\*

A change has been added to the Release 11.5 version of the '**Product Code Add**' screen (program **GETPCODF**) to default the seasons to 'M' for 'Medium' when adding a new product code for location zero.

This saves 12 key strokes for each new product code being added.

Field prompts that were getting out of sync with the actual fields on the screen were also fixed.

If you were upgraded to Release 11.5 prior to January 28, 2005, please contact Fanci Cross if you need this fix applied to your machines. All Release 11.5 upgrades done after January 28, 2005 will have this fix applied to their servers.
